## Task1

Differences:

- a. OpenFlow 1.3 supports multiple Flow Tables, while version 1.0 only supports one.
- b. OpenFlow 1.3 used instructions to maintain the functionality of actions from version 1.0 as well as extends it.
- c. As described in the code, OpenFlow 1.3 installed table-miss flow entry to deal with the situation that packet doesn't match any flow entry in the table. In this situation packets will be sent to controller.

## Task2

With OpenFlow 1.3 much less flow entries are needed than with OpenFlow 1.0.
